During the development of SignWriter Studio (see Presentation 13), I developed three new Fonts for the International SignWriting Alphabet 2010 (ISWA 2010).

This presentation explains the reasons why I felt these new Fonts are necessary, and the advantages of these Fonts and their related technologies.

I will also address what kind of software developer will be interested in using these new Fonts. I will discuss what problems the new Fonts address.

They are:

1. SVG Refinement Refactored
2. SignWriterLayoutEngine
3. SWA2010 XAML
