A Book/Video Review: The “Learn to Read American Sign Language in SignWriting” Package

by Alexandra Han

“SignWriting (SW) is an ‘alphabet’, or a list of symbols, that can be used to read, write and/or type one’s own sign language on paper or the computer screen.” This is how American Sign Language (ASL) signers and deaf students are taught to read and write their own signing style. As a result of this research, the signers can now communicate with others who are not deaf.

The “Learning to Read American Sign Language in SignWriting” package was based on the illustrations in the book that the authors drew from the ASLAS (American Sign Language Association) books. It is a great source of information about the different signs and how they are used.

In the beginning, I thought all the signs were the same, but that is not the case. The people are using different signs depending on where they are in the world. I also learned that the signs are not just letters, but are also symbols. The symbols are used to represent the signs and are very important in understanding the language.
