Teachers Attitudes About SignWriting

INTRODUCTION

SignWriting (SW) is a way to read and write sign language. It started and was first developed by Valerie Sutton in 1974. Teachers and parents began using SW all over the world.

SignWriting was studied wide world (e.g. Vasquez,1998, Rosenberg, 1999, Roald, 2000, Abushaira, 2002, Flood, 2002, Abushaira,2007, Galea, 2013)

- Some researches indicated to attitudes about SignWriting but attitudes was not studied specifically, **that is justify this study**

What is an attitude

It is "a relatively enduring organization of beliefs, feelings, and behavioral tendencies towards socially significant objects, groups, events or symbols" (Hogg, Vaughan, 2005).

Attitude

"..a psychological tendency that is expressed by evaluating a particular entity with some degree of favor or disfavor" (Eagly, Chaiken, 1993).

Structure of Attitudes

- **Affective** : person's feelings / emotions.
- **Behavioral** : attitude influences our behave.
- **Cognitive** : person's belief / knowledge.

Positive attitudes apparent in the following ways:

- Positive thinking.
- Constructive thinking.
- Creative thinking.
- Optimism.
- Motivation and energy to do things
- Accomplish goals.
- An attitude of happiness.

A positive helps in:

- Expecting success.
- Inspiring your feels.
- Passing obstacles.
- Converting failure and problems into success and chances
- Enhancing abilities.
- Enhancing confidence of self-esteem.
- Sasson ()

Attitudes about SW in researches

- Rosenberg,(1999). "sign language literacy" may open the door to literacy in an oral language.
- Success for this writing system is likely, as evidenced by its use in the deaf communities of many countries.

Rosenberg (1999) stated : Writing ASL would open many intellectual avenues to Deaf people.

She quoted (“I feel SignWriting will help them improve their skills in both languages" Cynthia Frey of Jordan Vocational High School)

- Roald (2000) explained that SW is natural means of conserving and communicating signs when not in eye-to-eye contact with my audience.

Hoffman (2011) declared that positive attitude about SW related to ability of capture nuance of language and reflects the way it is signed

Using SignWriting (paper format) will improve literacy rates among (a) the rural and isolated Deaf, (b) the older generation of Deaf, (c) the semi-literate Deaf (d), and the well connected, urban Deaf. [Barreto](#)(2014).

Stumpf (2014).

sign language writing, when incorporated in the education of deaf children, can represent a significant advance in the consolidation of a really bilingual education, as well as in the evolution of sign languages, and also indicates the possibility of new approaches to the teaching of oral language as a second language.

Madeson (). they are pleased in performing activities of reading and writing correctly by associating grapheme-phoneme and by comparing the signs they have already known.

Negative attitudes about SW

- **First** regards the small number of Deaf people who will need SW since Deafness is decreasing with the increase of cochlear implants
- **Second** concern expressed was about the large amount of glyphs available for writing Maltese Sign Language(LSM). The large choice is 'confusing' when it comes to deciding on how to write LSM. (Galea, 2013)

Negative attitudes about SW

Frost (2014). Writing by hand takes too long and is impractical

Study problem

- What is the Teachers Attitudes About SignWriting?
- Is there significant differences between Teachers Attitudes About SignWriting according study variables ?
- what are most frequented SW software?

The Goal

- In this study we want to investigate teachers attitudes and perspectives about SW..

Important of the study

It gives indicators

- how far SignWriting can go
- It gives indicators about abilities to pass the obstacles faced SignWriting users (Deaf people, parents ,teachers researchers..)

Study methodology and tool

Survey study conducted by applying questionnaire of three parts

1- Cover Letter.

2-Demographic information.

3-(14) Paragraph.

The primary copy consisted of 20 paragraphs it was reviewed by 5 reviewers (one of them was Valerie Sutton)

Validity, Reliability of the survey

Validity :

- 1- Correlation between paragraphs and total score.
- 2- Agreement of reviewers

Reliability:

Cronbach's Alpha = .756 15

P	correlation
1	.825**
2	.731**

14	.664**

Participants

The survey distributed online

<https://app.keysurvey.com/votingmodule/s180/f/761291/173b/>

We got 17 responds

According to the variables of : Country, Sex, Education level, SW skills, SW model , SW experience and SW software.

The participants was as following

Participants by Country

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Brazil	4	23.5	25.0	25.0
	Colombia	1	5.9	6.3	31.3
	France	1	5.9	6.3	37.5
	Germany	3	17.6	18.8	56.3
	Saudi Arabia	2	11.8	12.5	68.8
	Tunisia	1	5.9	6.3	75.0
	United Stat	4	23.5	25.0	100.0
	Total	16	94.1	100.0

Results

- We made analysis of data to get the results as following
- To answer the first question: what is the attitude of the teachers (participants) about SW?

	Paragraph	Mean	Std. Deviation
1	SW appearance is acceptable.	4.2941	.68599
2	I use SW in communication.	3.8235	1.33395
3	I use SW in teaching Deaf students.	3.8824	1.31731
4	I use SW in my daily life.	3.9412	1.34493
5	SW helps in increasing spoken language vocabulary.	4.2353	.75245
6	SW helps in increasing sign language vocabulary.	4.52941	.624264
7	SW improves reading skills.	4.3529	.86177
8	SW helps in sign language skills.	4.5882	.61835
9	SW improves self-image for Deaf people.	4.3529	.70189
10	SW improves educational achievement for Deaf people.	4.2941	.77174
11	SW helps in applying (full inclusion) for Deaf students.	4.2941	.77174
12	SW improves translation levels between spoken and sign languages.	4.3529	.70189
13	Using SW makes sign language equal to spoken language.	4.1176	1.16632
14	SW is enjoyable.	4.5882	.61835
	total score of attitudes	59.6471	8.91586
	Valid N (listwise)		

Ranking the at

Excellent	70	61
V.good	<61	52
Good	<52	43

To answer the 3d question : what are most frequented SW software?

We asked the participants what are the most SW software (participant can chose more than one choice)

The results indicated that the most software used is SignPuddle Online 15 of 17

And no participant used SignWriter Studio

Software frequency

Software	Frequency]
SignPuddle Online	15
SignWriter Studio	0
Delegs Editor from Germany	6
SWEdit from Brazil	5
SignMaker 2015	3
SignWriter DOS	2
Other software	3

Discussion

- According to 1st question(What is the Teachers Attitudes About SignWriting?) : Attitudes about SW in general is positive

Means of responds on paragraphs :(P2)I use SW in communication. M= 3.82-(P14) SW is enjoyable .M= 4.5882 of 5

Mean of total score = 59.64

that shows positive high attitudes about sw.

This result give an impression that SW future will be fare good, it agree with the positive attitudes in (Galea,2013, Abu shaira,2002,2007 , Hoffman,2011).

Structure of attitude about SW

Affective : person's feelings / emotions	Behavioral : attitude influences our behave	Cognitive : person's belief / knowledge
<p>1-SW appearance is acceptable</p> <p>14-SW is enjoyable</p>	<p>2- I use SW in my daily life</p> <p>3- I use SW in teaching Deaf students</p> <p>4- I use SW in communication</p>	<p>5. SW helps in increasing spoken language vocabulary</p> <p>6. SW helps in increasing sign language vocabulary</p> <p>7. SW improves reading skills</p> <p>8. SW helps in sign language skills</p> <p>9. SW improves self-image for Deaf people</p> <p>10. SW improves educational achievement for Deaf people</p> <p>11. SW helps in applying (full inclusion) for Deaf students</p> <p>12. SW improves translation levels between spoken and sign languages</p> <p>13. Using SW makes sign language equal to spoken language</p>

Discussion

- According to 2nd question: Is there significant differences between Teachers Attitudes according study variables ?

There are no significant differences between Teachers Attitudes according to variables(: Country, Education level, SW skills, SW model , and SW experience.).

Discussion

- These results can explained in the light of Easier learning of SW.

Grate of benefit of SW in daily life and communication, and education. That is agree with all researches conducted on SW(flood,2002; abushaira,2007;Galea, 2013)

Discussion

but there are significant differences between Teachers Attitudes according to sex favor of male. that is maybe refers to higher level of anxiety in learning writing among female than its level among male. Muhaisen, Al-Haq (2012).

For SW software it was obvious that SignPuddle is the most used software to write sign language that maybe refers to grate support from Valerie Sutton and Steve Slevinski, and the ability to access online that is facilitating its use.

Recommendations

- We need more investigation of community and decision maker attitudes.
- We need more investigation about real rejection reasons of SW in some areas in the world.
